WHAT IS A COLLEGE MANAGEMENT SYSTEM?

The College Management System (CMS) is a web-based platform designed to automate both academic and administrative tasks within a college. The system provides role-based access for different users such as administrators, teachers, and students, ensuring that each user can only access the features relevant to their role. By digitizing processes like student record management, attendance tracking, course management, and result processing, the system reduces manual work and minimizes errors. Additionally, CMS improves accuracy, transparency, and efficient data retrieval, allowing information to be accessed quickly and securely whenever needed.

PROBLEM STATEMENT

- Manual record-keeping is slow and error-prone.
- Delays in retrieving information and reporting.
- Manual record-keeping is slow and error-prone.
- Security risks for sensitive data.
- Lack of real-time tracking of students, attendance.

PROPOSED SOLUTION

Web-based system

- Centralized web-based system for academic and administrative tasks.

Admin access

- Admins can manage students, teachers, courses, and generate reports.

Teacher Access

- Teachers can manage attendance, courses, and student performance

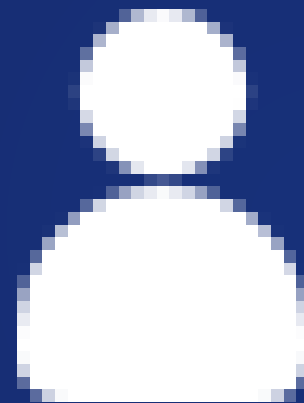

Student Access

- Students can view attendance, results, and fee details.

Reduce Workload

- Reduces manual workload and improves efficiency.

PHP

TECHNOLOGY USED

DATABASE

MYSQL

IDE

VS CODE

USED API

Online Payment API

The online payment module allows students to **pay their fees digitally through the CMS system.**

Payment Platforms Considered

- JazzCash
- Easypaisa

Chart API

Chart.js is used to display **visual statistics and analytics** in the CMS dashboard. It helps administrators understand system data quickly through graphs.

Technology Used

- Chart.JS

Complain Management System

The complaint module allows students to **submit complaints or feedback to the administration.**
